

How to Dispose of Thermoshield Gel Products

Thermoshield reusable gel packs contain a Food-Safe, non-toxic and environmentally-friendly biodegradable gel. Whilst the gel is non-toxic, we do not recommend human consumption.

We do recommend reusing them, making them even more economical and further reducing environmental impact.

HOW TO RE-USE

Thermoshield ice packs and blankets can be re-used over and over, making them even more economical and reducing environmental impact.

Thermoshield ice packs are ideal for both domestic and commercial use. Simply pop them in the freezer and re-use them as ice packs. They make great cold packs for eskies!

HOW TO RECYCLE

1

THAW

Ensure the ice pack is completely thawed.

2

SNIP

Snip each cell of the ice pack.

3

ADD

Pour gel into your sink or bucket (if you want to pour onto the garden).

4

MIX

Add a teaspoon of salt (or more if required) and mix until it turns to water.

5

POUR

Add water and flush down the sink or pour over the garden. The sodium polyacrylate in the liquid is great for increasing water retention in the soil and is safe to use on the garden.

6

BIN

Discard thin outer package into your kerbside waste bin. Alternatively, the whole pack (including gel) can be safely placed in the bin.
